LED SOLUTION SYSTEM SOLUTION	

B2 was founded by young engineers from lighting, electricity and IT fields with a mutual objective called "Lightning Management". The first step that the lighting business took was when it first suggested the digital control' s lighting solution during a time where there was a shortage in the domestic lighting engineering market.

Since then B2 has successfully completed one of the best well build projects both overseas and domestic. The domestic lighting engineering department took the lead developing into a corporation. At present having development, production and construction we are able to build business' s infrastructures thus turning into a more responsible and professional lighting company.

ENGINEERING

With the creation of new LED light sources and supply of digital control technology the technological solutions in the lightning field caused a rapid development. B2 has been and always will continue to be ahead of anyone in actively applying and utilizing such changes. Innovative and professional lightning engineering is B2' s beginning and end.

LIGHTING MANAGEMENT

What B2 is pursuing is not a fixed lightning but a changeable lightning. This is the meaning behind Lightning Management which implements dynamic lighting that changes the brightness, direction, and color of the light. We will study and present this technology that connects people and lights before anyone else.

ARCHITECTURAL LIGHTING

Lighting has a deep impact on human behavior and environment. The environment can be called architecture, and in this architecture the human behavior is analyzed thus creating a harmonious lightning matching the architecture called Architectural lightning. Archion, the architectural lighting solution made by B2, is growing successfully as a unique domestic architectural lighting brand, and will constantly develop the products while meeting the expectations of both architects and lighting designers.

B2

You might ask why the name of the company is B2?

B2 is the name associated with Bus Communication, which represents a digital network. The basis of the system which B2 is making is the Bus network. The interesting thing about the Bus network system is that each device is connected to the network while carrying out its functions which can be compared to the relationship between a person and a person or company and company. B2 wishes to achieve a mutual development with all the connected people and companies.

COMPANY B2 Co., Ltd
FOUNDATION April 5, 2006

All the products of Archion go through the mock-up testing process for any predictable situation in the actual environment to be installed. In this process, we minimize the Risk of possible results, and find the best lighting solution to suit with the intention of lighting designers.

Facilities such as Movable ceiling, grid wall, screen wall, and also optical measuring equipment are fully settled so that it is viable to discuss the project closely and practically with the designers.

LIGHT LAB is an open lab space for ARCHION, where any lighting designer could test to realize desired light.

Archion R&D team aims to develop products that clarify electrical, physical and optical features.

P, L, and M series from Archion brand have been created through constant development, each product from the series can select the type of power source and the shape of the light depending on the architectural environment. It is easy to change the light distribution by simple control. Archion R&D team is mainly focusing to realize the desires what lighting designers wanted for when they designed the architectural lighting such as glare control, wireless communication control. The development has been speeding up for new products based on various ideas.

Control for the lighting is also considered to be crucial area of R&D team. Various methods of communication and control are being designed considering different project environment including the development for drivers with AUTO addressing and DMX/RDM communication specifications.

A large size of GONIOPHOTOMETER, which is available to examine over 2 meter-length fixtures, and a complete dark room are established as perfect environment measuring the lighting data. We have optical data of all of Archion products in IES files. The CUSTOMIZED product, which is specially produced according to the feature of the project, also allows accurate simulation through programs such as RELUX and DIALUX by measuring the light distribution.

We established a production environment to enable mass production with the highest quality through expanding manufacturing facilities and measuring equipment continuously, which is necessary to product perfect products. Also, to accomplish a complete production management environment, we obtained KS, CE, RoHS certificate and ISO 9001 certificate for quality management system.

Computerized logistic system and independent warehouse environment have been set so that the systematic logistics and inventory management is available, which enables faster and more accurate product delivery. Also, ARCHION products are managed by serial numbers and increased the reliability of product quality control by managing the history by BAR CODE.
